CHANGE NECESSARY IN YOUR ACCOUNTING SYSTEM

Import form	Field	Description - Adjustment in Accounting System
All formats	---	If the last row in the file is not ended with "enter", the file will not be processed. The last row of the file must end with "enter" <CRLF>.
CFD - domestic payment, format MultiCash	KC:, UK:	If the sub-fields are separated by a "non-breaking space", the file will not be processed. The non-breaking space must be replaced with a standard space (ASCII 32).

GENERAL

Import form	Field	Description
CFD - domestic payment, format MultiCash	---	If the rows are ended with <LF> instead of <CRLF>, the file will not be processed.
CFD - domestic payment, format MultiCash	---	If there is certain order of the AD, AK, DI, ZD, ZK, EC, AV, UK, KI fields, the file will not be processed.
All formats	---	A "CP852" coded file (Multicash standard) can be loaded as "ISO 8859-1" or "ISO 8859-2", but only with incorrect diacritic marks
CFD, CSV and Domestic Gemini	---	A non-numerical constant, variable or specific symbol is replaced by 9999999999 (10 nines) and the payment is marked as incorrect. The file may be imported/uploaded. "Leading" and "trailing" spaces are disregarded and not considered an alphanumeric character.
CFD, CSV and Domestic Gemini	---	A non-numerical account number is replaced by 0 (zero) and the payment is marked as incorrect. The file may be uploaded.
CFD, CSV and Domestic Gemini	---	A non-numerical account number prefix is replaced by 999999 (6 nines) and the payment is marked as incorrect. The file may be uploaded.
CFD, CSV and Domestic Gemini	---	A non-numerical bank code is replaced by 99 (2 nines), the payment is marked as incorrect. The file may be uploaded.
